C99 Volpe

The name Fox Cutlery is well known in Europe. Fox started manufacturing knives in the 1970s in Maniago, Italy swiftly gaining a reputation for uniting traditional materials with quality construction and pioneering designs. The Fox and the Spyder met, and the outcome is a Spyderized Fox design manufactured in Maniago. As expected from Spyderco, there is a Round Hole and calculated ergonomics but alongside that is a traditional European stainless handle overlaid in blonde Olivewood. Positioned forward of the Spyderco Round Hole, a sweeping cutout sits ready for index finger placement, boosting control. Handle has an integral Chris Reeve-style lock and lanyard hole. Limited production.

- N690Co flat-ground blade
- Edge: PlainEdge
- Righthand tip-down carry

FB11 Kumo

Kumo means spider in Japanese and is the fixed blade knife designed by knifemaker R.J. Martin and manufactured by Spyderco. A self-professed steel junkie, Martin is known for integrating multiple grind lines into his knives. The solid 9-inch piece of VG-10 steel has two striking grinds, a swedge-grind on the spine and a hollow-grind above the cutting edge. They converge center blade creating a streamlined and symmetrically tapered look. A group of notches, where the thumb naturally settles on the spine, latch onto the thumb pad adding an appreciative level of grip and cutting control. In Japanese style, the handle is hand-wrapped with epoxy-saturated cord over an undercoat of black stingray skin, which holds a silver Spyderco bug Menuki peeking through the wrapping.

- VG-10 Hollow-ground blade
- Edge: PlainEdge
- Hand-wrapped handle
- Kydex sheath with multi-position Tek-Lok® fastener

C41BBK Native Black Blade

The C41 is a bona fide USA native manufactured in Golden, Colorado. Its spear-point blade is high-performance CPMS30V covered with a non-reflecting black coating. The patented Bi-Directional Textured® handle offers graduating levels of steps radiating outward from the center of the handle putting the skids on sliding forward or backward while cutting. Furrows ground from the blade's spine latch onto the thumb for appreciative control over the cutting edge. Lanyard hole.

- David Boye dent
- Bi-Directional Textured® FRN handle
- Weight reducing spine swedge and spine texturing
- Ambidextrous black steel clip carries tip-up

C74 Ocelot

In reality, hunting specific knives get used for cutting much more than just what you bag and outdoor knives find their way into the hands of the hunter field dressing their success. The Ocelot is as close as we come to satisfactorily covering both bases. The blade's drop-point tip is thick at the end and its curved full-belly makes short work of field chores. Constructed with cobalt containing VG-10 it stays sharper, longer in the field when sharpness matters most. Ergonomic G-10 handle is machined with pawprints (pugs) for tactile resistance when gripped in a cold, oily or wet hand. The Ocelot crosses seamlessly from sport to field and back. Mid-spine centered back lock. Steel-lined lanyard hole for backup attachment in water or brush.

- VG-10 hollow-ground blade
- Tim Wegner Design
- Edge: PlainEdge
- Ambidextrous tip-up/tip-down carry

C92EVP Kopa Evrina
C92TCP Kopa Tiger Coral

Spyderco introduces the next two installments in the Kopa Gentleman's Series. Kopa's stainless handles are hand-fitted with Evrina or Tiger Coral inlays. Evrina is manmade ivory, creamy in texture that scrimshaws like genuine ivory. Each Tiger Coral folder varies with the patterns and natural textures found in fossilized coral. An angled handle ergonomically positions the hand and steel bolsters create a contemporary look. Features a spine cusp and mid-spine positioned back lock. Limited production of 600 pieces each handle material. Additional handle materials to come in the series.

- VG-10 flat-ground blade
- Edge: PlainEdge
- Righthand tip-down carry

C93 Navigator II

We live in a world where using large pocketknives in public can create notice. For this, Spyderco develops small-stature folders with ample blade strength and handle leverage that are suitable for full-sized, large cutting jobs. We call these Little Big Knives. The Navigator II design focuses on a strong lock, robust blade and ergonomically advanced handle. Combined together these features convey the tactile sensation and performance of a full-sized knife offering significant cutting power in a small size blade. On the underside of the handle are a series of scalloped angles that optimally settle the hand and fingers into gripping position. Makes a discreet money-clip or tie tack.

C96 SpyKer

Extraordinary and unexpected things happen when two well-regarded knife manufacturers combine forces. Both Kershaw® Knives and Spyderco construct high-performance cutting tools each carrying the unique appearance, personality, and functional designs associated with their respective brand name. Seeing a SpyKer is like looking into a face and thinking "I know you from somewhere". It appears to be a Kershaw while equally resembling a Spyderco. Kershaw's® chief designer and prominent knifemaker Ken Onion is responsible for the pleasingly curved shape while Spyderco's Sal Glesser adds the Spyderco Round Hole and expected ergonomics. Spyderco's Round Hole (a mark of quality in the industry) lines up with two smaller holes of descending size. The three holes grouped by size are a design feature associated with Kershaw symbolizing their quality and craftsmanship. Precision-tooled G-10 handles are inlayed with silver carbon-fiber twill and assembled with an adjustable pivot pin and phosphor bronze bushings. The SpyKer is the upshot of two companies working in affable collaboration from design idea to finished product. Packaged in a zippered pouch. Limited to 3000 pieces.

- CPMS30V Hollow-ground blade
- Edge: PlainEdge
- Walker LinerLock®
- Righthand tip-down carry
- Made in Golden, Colorado

C97BM Viele II

The C97 carries knifemaker Howard Viele's signature appearance and looks tactical, modern and gentlemanly all with a high-tech tone. On the blade is Howard's signature logo of three small parallel holes and a circular symbol representing the Japanese God of War. Texturing along the spine grips the thumb's pad keeping it in contact with the blade for responsive control over the cutting edge. The stainless handle has a black G-10 scale on the back and a Micarta tile superimposed on the front. Open spine design lessens weight and facilitates cleaning and drying the knife's inner workings.

- Walker LinerLock®
- VG-10 hollow-ground blade
- Edge: PlainEdge
- Righthand tip-down carry

C98 Poliwog

A Poliwog represents metamorphosis in the animal kingdom, changing from one form to a different form to adapt in an environment. Same principle here, as the Poliwog CLIPIT thrives in a small-knife-friendly environment while keeping the features necessary to excel in a harsh, heavy cutting and performance setting. Its unusual open-ended patented Ball Bearing Lock™ exposes the inner workings for cleaning. It also rates as one of Spyderco's highest strength locking mechanisms. It fits comfortably and fatigue free in the hand and features a curving handle and blade.
