

The Fusion of Innovation and Performance

- 1 Screw together construction allows for cleaning and adjustments.
- 2 Aggressive Bi-Directional Texturing[®] offers better traction and improves ergonomics for smoother opening.
- 3 Dual skeletonized stainless steel liners make the knife stronger and lighter with all components attaching through the liners for enhanced sturdiness and rigidity.
- 4 Blade has a stronger tip, an enlarged 13mm opening hole and slip resistant jimping on the spine.
- 5 Phosphor Bronze bushings smooth out the open/closing action.
- 6 New 4-way black steel clip lets you set the folder for tip-up/tip-down and left/right-handed carry.

STRENGTH IN INNOVATION

Until fifteen years ago the knife industry could be classified as a conservative enterprise. In 1990 Spyderco shook things up, changing the way knife hounds looked at high-performance one-hand-open pocketknives with the introduction of our Delica and Endura lightweight folders. Both folders settled into bestseller spots in Spyderco's line up and we haven't slowed improving them since. Their refinement has been so continual we tagged the updating/upgrading process with the term CQI - Constant Quality Improvement. During their CQI journey we've tweaked ergonomics, refined blade steels and fine-tuned performance countless times. This evolutionary work in progress reaches a zenith with our new 2006 Delica4 and Endura4. They may even make those same knife hounds raise a brow again after fifteen years.

WHAT'S NEW AND WHY IT'S BETTER

C10SS-4/C11SS-4 Stainless Delicas and Enduras did not escape the ongoing CQI sweep. The blade steel is upgraded to high carbon VG-10 and the handles now also offer a 4-way carry clip. Steel handled knives have just enough weight to reassuringly remind you they're in your pocket, ready when you need them.

C10TR/C11TR

Trainers teach safe opening/closing skills, actions and drills without the consequences of meeting a sharp edge.
